
Basic information

Preface

Designwerk

The service portal contains general documents such as manuals, commissioning and decommissioning instructions and other documents for all series of Designwerk products.

The portal also includes circulars, service, modification and repair instructions, as well as the safety regulations and information mentioned therein.

The documents provide a basis for proper and professional execution of the work.

Designwerk's E-trucks contain power electronics and high-voltage components with dangerous voltages and currents, accordingly, we assume special expertise in handling them.

Please read the relevant document, as well as the safety information and notes mentioned therein, carefully before using the product or carrying out any work on it.

Due to the technical development of our products, different versions of the product types may lead to deviations in the work description.
